| Program Issues Identified and Corrected .....       | 45 |

## BACKGROUND

The Wisconsin Department of Transportation (WisDOT) implemented the Wisconsin Vehicle Inspection Program (WVIP) in April 1984 in response to the federal Clean Air Act requirements. A major focus of the Clean Air Act is to reduce emissions that form ground-level ozone. Motor vehicles, industries, and smaller area sources such as lawn mowers, power boats, paints, solvents and other consumer products emit these ozone precursors. Areas exceeding federal air quality standards – established under the Clean Air Act – are designated as non-attainment and are required by federal law to reduce emissions.

The WVIP is one of the primary components of the strategy to reduce air pollution in southeastern Wisconsin area. Each year, over 600,000 cars and light duty trucks in a seven county region of southeastern Wisconsin's ozone non-attainment area are tested for emissions. The program covers more than 2,500 square miles over seven counties: Kenosha, Milwaukee, Ozaukee, Racine, Sheboygan, Washington, and Waukesha. Vehicles receive inspections in a decentralized network of approximately 200 private inspection facilities (PIF) located in all seven of the program counties. Vehicle population determines PIF distribution. At the end of calendar year 2020 the PIF per county totals were:

- Kenosha = 17
- Milwaukee = 59
- Racine = 18
- Sheboygan = 12
- Waukesha = 41
- Ozaukee = 8
- Washington = 19

The emissions tests are free to the motorist. The state of Wisconsin pays the program contactor, Opus Inspection, a monthly fee of \$216,330.00. The state Transportation and Petroleum Environmental Cleanup Fund Act (PECFA) funds pay for the program.

## PROGRAM OVERVIEW

|                    |  |
|--------------------|--|
| Geographical Area: | Seven southeastern Wisconsin counties: Sheboygan, Washington, Ozaukee, Waukesha, Milwaukee, Racine and Kenosha. Testing region covers 2,500 square miles.  |
| Test Procedure:    | OBDII testing, in which a vehicle's on-board computer is checked for emissions-related problems, is the standard test for all 1996 and newer gasoline-fueled vehicles equipped with OBDII technology and all 2007 and newer diesel-fueled vehicles equipped with OBDII technology. |
| Network Size:      | 200 Private Inspection Facilities, 200 inspection lanes, 5 Technical Assistance Centers  |

## Model Years (MY) Tested

## *Registration Renewal Testing: Model Years 1996 through 2017*

- Model year 1996-2006 gasoline-fueled vehicles up to 8,500 lbs. gross vehicle weight rating
- Model year 2007 and newer gasoline-fueled and diesel-fueled vehicles between 8,501 and 14,000 lbs., gross vehicle weight rating

## *Change of Ownership: Model year 2015 and older in CY 2020*

## QUALITY CONTROL/QUALITY ASSURANCE

The WIVIP has several interrelated systems and functions monitoring program performance and accuracy. These systems include digital monitoring of all inspections, trigger reports alerting program management to any testing anomaly, videos of each inspection process, regular overt station checking on equipment performance and covert inspection audits.

The digital monitoring/trigger report capabilities enable constant program monitoring of inspection accuracy. Program management uses this tool to identify and remedy any potential issue. The regular station audits verify the accuracy of program functions at each PIF, the inspector's and inspection analyzer.

## NETWORK

The WIVIP is a decentralized test and repair network comprised of 200 Private Inspection Facilities located throughout the seven-county program region. The stations receive all analyzer equipment, service, consumables and inspector training, free of charge from Opus Inspection, the program management company. The list of PIFs participating in the network in 2020, and their locations (see section 40 CFR Part 51.366 (b)(1)(i) of this report).

## PROGRAM RATIONALE

Elevated spring and summertime ozone levels remain an air quality challenge along the coast of Lake Michigan, including Southeastern Wisconsin. Despite significant improvements in air quality in recent years, the state has several areas (all of Milwaukee and Ozaukee counties and parts of Door, Kenosha, Manitowoc, Racine, Sheboygan, Washington and Waukesha counties) that are currently designated as non-attainment areas for federal ozone standards.

## MOTOR VEHICLE EMISSION REDUCTIONS & AIR QUALITY IMPROVEMENT

Motor vehicle emissions have a substantial role in determining regional air quality. The Wisconsin Vehicle Inspection Program (WVIP) is Wisconsin's most significant vehicle emission reduction program, and one that contributes to improved air quality in the entire upper Midwest.

The Wisconsin Department of Natural Resources (DNR) estimates that the program achieved the following reductions in on-road motor vehicle emissions during 2020:

- Volatile organic compounds (VOC) emissions reduced by 0.60 tons per summer weekday, or 4.5% (5.2% reduction in light-duty vehicle emissions).
- Oxides of nitrogen (NOx) emissions reduced by 0.57 tons per summer weekday, or 2.2% (6.0% reduction in light-duty vehicle emissions).

- Carbon monoxide (CO) emissions reduced by 23.28 tons per summer weekday, or 9.4% (10.2% reduction in light-duty vehicle emissions).

### Hot Summer Weekday Emissions (tons) For On-Road Motor Vehicles

|   |                       | Volatile Organic Compounds (VOC) |              |              |              |              |              |              |              |
|---|-----------------------|----------------------------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|

**NOTES:**

1. Emissions calculated using the U.S. EPA's new MOVES3 model for all calendar years. This model provides lower emission reduction percentages from the WVIP than the model used in the previous year's report (MOVES2014b).
2. The current and previous versions of the MOVES model do not calculate benefits from the testing of diesel-powered vehicles nor heavy-duty vehicles. As a result, the WVIP reductions presented above are slight under-estimates since for model years 2007 and newer the WVIP does test vehicles up to 14,000 pounds gross vehicle weight rating, powered by both gasoline and diesel fuel.
3. Emissions calculated for the year 2020 are preliminary, since local 2020 vehicle-miles of travel data are not yet available. Instead, the 2020 vehicle-miles of travel was estimated by applying a national 2019 to 2020 growth rate, calculated by the Federal Highway Administration, to the 2019 vehicle-miles of travel. This rate is 0.868 (13.2% decrease), the large decrease resulting from the COVID-19 pandemic. The DNR then allocated all of this decrease to the light-duty classes, since available information indicates heavy-duty travel remained at about 2019 levels during most of 2020. This resulted in a 14.4% travel decrease for the light-duty classes and no change in travel for the heavy-duty classes.

4. In July 2008, the WVIP dropped tailpipe testing entirely and only tested vehicles of model years 1996 and newer by scanning their on-board diagnostic (OBD) systems. This exempted all vehicles of model years 1995 and older, resulting in lower emission reduction percentages after 2008 than before. After 2008, the emission reduction percentages show a generally increasing trend on account of an increasing percentage of the total vehicle travel by the tested vehicles (model year 1996 and newer vehicles).

5. The one exception to the trend of increasing emission reduction percentages after 2008 is the trend for NOx. The NOx reductions in 2017, 2018 and 2019 (2.9%, 2.8% and 2.7%, respectively) are less than the 2014 NOx reduction (3.6%). A key reason for this decline is that between 2014 and 2020 federal regulations progressively lowered gasoline sulfur levels. These lower gasoline sulfur levels significantly reduced the NOx emissions from gasoline-powered vehicles (most of which are subject to the WVIP), thus, providing a smaller share of on-road emissions from vehicles subject to the WVIP and a larger share of on-road emissions from vehicles not subject to the WVIP (e.g., most heavy-duty diesel-powered trucks). This decreasing share is reflected in the above table, which shows that in 2014 the share of NOx emissions from light-duty vehicles was 54%, but by 2019 it was less than 40%.

6. Because of the COVID-19 pandemic, emission reductions from the WVIP were less in 2020 than in 2019. The main reason for the decrease was a lower rate of compliance in 2020 because of the pandemic (79.2% compliance rate in 2020, in comparison to an 84.7% compliance rate in 2019). Another reason, which especially affects NOx, is that the reduced light-duty travel resulting from the pandemic lead to a larger share of emissions from vehicles not subject to the WVIP.

Over time, the WVIP has contributed to the following air quality improvements in Wisconsin:

Ozone: Ground-level ozone concentrations in southeastern Wisconsin have dropped significantly since the year 2000, as shown in the figure below. During the late 1990s and early 2000s, maximum ozone design values ranged from 0.092 parts per million (ppm) to 0.101 ppm in the WVIP area. These values have since decreased markedly, to a peak design value of 0.075 ppm for the years 2018 to 2020.

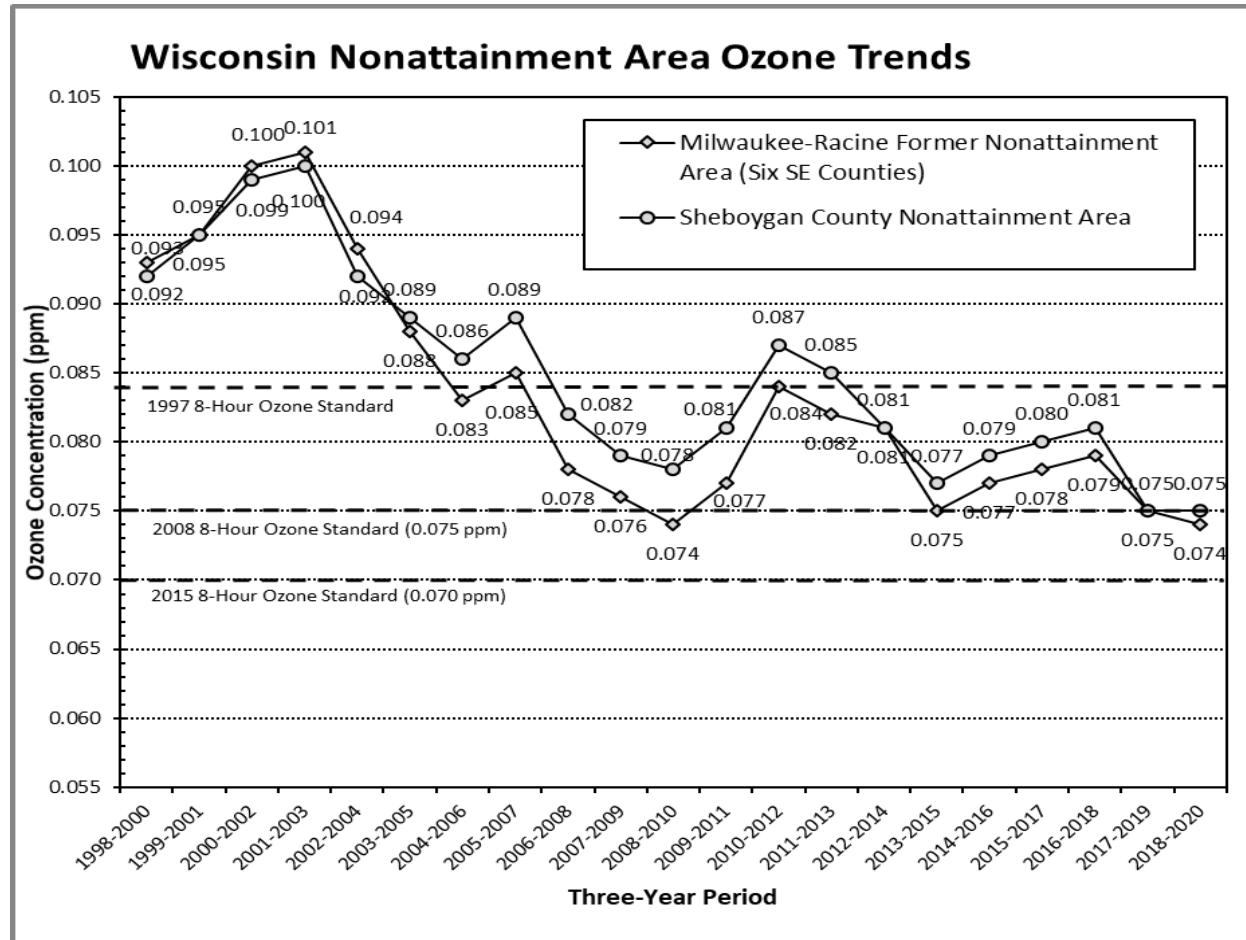

During that period, U.S. EPA has repeatedly lowered the level of the 8-hour ozone standard, from 0.08 ppm in 1997 to 0.070 ppm in 2015. Wisconsin has made the following progress in meeting these standards:

- **1997 Ozone Standard (0.08 ppm, rounds to 0.084 ppm):** Ten counties in eastern Wisconsin (including all seven in the WVIP) were designated as nonattainment for the 1997 standard. All but one of these counties (Sheboygan County) were redesignated to attainment before the standard was revoked in 2015.
- **2008 Ozone Standard (0.075 ppm):** Two areas of the state, Sheboygan County and eastern Kenosha County, were designated nonattainment for the 2008 standard. Effective July 10, 2020, the U.S. EPA redesignated all of Sheboygan County to

attainment of the 2008 standard as a result of the lower ozone levels in this area, which attained this standard.

- **2015 Ozone Standard (0.070 ppm):** Effective August 3, 2018, the U.S. EPA designated nonattainment areas under the more stringent 2015 ozone standard. These nonattainment areas comprised narrow parts of six eastern Wisconsin counties (Kenosha, Milwaukee, Ozaukee, Sheboygan, Manitowoc and Door). Effective June 10, 2020, the U.S. EPA redesignated the nonattainment area within Door County to attainment of the 2015 standard as a result of the lower ozone levels in this area, which attained this standard. Effective July 14, 2021, EPA revised Wisconsin's 2015 ozone standard designations to expand the nonattainment areas in the abovementioned counties as well as include parts of Racine, Waukesha, and Washington counties.

The WVIP will play an important, ongoing role in the state's efforts to attain the ozone standards in the current nonattainment areas and to maintain attainment throughout all of eastern Wisconsin.

**Figure 1.** Trends in ozone design values for the Wisconsin Vehicle Inspection Program area. The highest value in the area is shown in each case. Note that since temperature has a strong influence on ozone concentrations, the values are highest for the time periods including hot summers, most notably the years 2002 and 2012.

**Note:** The "6 SE Counties" are Kenosha, Milwaukee, Ozaukee, Racine, Washington and Waukesha counties.

**Carbon Monoxide:** Between 1977 and 1984, southeastern Wisconsin exceeded the federal carbon monoxide standard 35 times. Since the program's implementation in 1984, southeastern Wisconsin has not exceeded this standard. Credit for these air quality improvements goes to various state and federal ozone control measures implemented both in Wisconsin and other states. Aside from Wisconsin's and neighboring states' vehicle inspection and maintenance programs, these include reformulated gasoline, national emission standards for new motor vehicles, national fuel standards, utility and industrial source controls, and gasoline vapor recovery controls.

Credit for these air quality improvements goes to various state and federal ozone control measures implemented both in Wisconsin and other states. Aside from Wisconsin's and neighboring states' vehicle inspection and maintenance programs, these include reformulated gasoline, national emission standards for new motor vehicles, national fuel standards, utility and industrial source controls, and gasoline vapor recovery controls.

## TEST DATA REPORT OPERATING STATISTICS

### ALL TESTS

*USEPA Reporting Requirement: 40 CFR Part 51.366 (a)(1)  
The number of vehicles tested by model year and vehicle type.*

The tests represented in the table below include test records for initial tests, retests and waivers. It contains all test results, including pass, fail, waivers, aborts, rejects and voids. All tables in this section do not include test records that were performed in the course of the state audits.

| MODEL YEAR | Passenger Car | SUV    | Truck  | Van   | Grand Total |
|------------|---------------|--------|--------|-------|-------------|
| 1996       | 1,044         | 129    | 329    | 46    | 1,548       |

## VEHICLE WAIVERS

---

**USEPA Reporting Requirement: 40 CFR Part 51.366 (a)(2) (v)**

***The number of vehicles tested by model year and vehicle type receiving a waiver.***

A motorist may request a waiver from further inspection requirements for the current inspection cycle if the vehicle fails a second retest after repairs. In general, a waiver may be granted if the motorist exceeds the cost limit on emission-related repairs and adjustments at a recognized repair facility. The waiver repair cost limit excludes emission system warranty repairs and the repair/replacement of tampered emission control devices identified during the equipment check.

Vehicle owners can also apply for a waiver if their vehicles continue to fail the emissions test. A vehicle is eligible for a waiver when the following conditions are met:

1. The vehicle has failed an emissions inspection and following repair and re-inspection, it still does not meet test requirements. Repairs made over 180 days prior to the expiration of the license plate cannot be applied to the waiver repair cost limit.
2. The vehicle has passed a waiver emission equipment inspection to determine if emission control equipment is missing, modified or disconnected.

The Vehicle Inspection Reports (VIR) has been presented to the Waiver Investigator at the time a waiver is requested. The REPAIR DATA section of these reports has been completed in accordance with instructions provided on the report form. Motorists must bring their vehicle and itemized receipts for parts and labor to verify the emission related repairs.

1. For all vehicles which exceed the terms of the manufacturer's emission performance or defect warranty coverage at the time of the scheduled emission inspection, the owner must have emission related repairs performed on the vehicle at a recognized repair facility.
2. The actual costs of emission related repairs and adjustments exceed the repair cost limit for that vehicle's county of domicile. Only repairs that are related to the vehicle's cause of failure can be used to apply for a cost waiver. Costs covered by any warranty or costs to repair/replace emission control equipment that has been removed, modified or disconnected are excluded.
3. Until Jul 1, 2020, the repair cost limit for all model year vehicles subject to testing was \$918. The waiver repair cost limit was adjusted to \$935 on Jul 1, 2020. This figure is adjusted annually by the DNR per NR 485.045.

The following chart illustrates the cost waivers granted in 2020 by model year. Since mostly odd model year vehicles were tested in 2020, they account for the majority of the waivers.

| <b>Model Year</b> | <b>Initial Fail</b> | <b>Diagnostic Waiver</b> | <b>Cost Waiver</b> | <b>Grand Total</b> | <b>Waiver Rate</b> |
|-------------------|---------------------|--------------------------|--------------------|--------------------|--------------------|

## No FINAL OUTCOME

**USEPA Reporting Requirement: 40 CFR Part 51.366 (a)(2)(vi) The number of vehicles tested by model year and vehicle type with no final outcome (regardless of reason).**

The vehicles included in the table below did not have a final outcome of either a pass or waiver test result during the reporting period.

### Vehicles with No Known Final Outcome

## COMPARISON OF ON-BOARD DIAGNOSTIC TESTS WITH OTHER TEST TYPES

**USEPA Reporting Requirement:** 40 CFR Part 51.366 (a)(2)(xiii) –(xviii) There is no data for comparing on-board diagnostic tests with other test types because Wisconsin only conducts on-board diagnostic tests.

## CHECK ENGINE LIGHT COMMANDED ON

A small population of vehicles in southeastern Wisconsin produces most of the vehicle exhaust pollution – these are the so-called gross polluters. As vehicles are driven, problems can develop because of defective parts, improper maintenance or simply from deterioration due to age and usage. This helps explain why a vehicle can be relatively clean one year and become a gross polluter at the time of its next inspection. Since hydrocarbon, carbon monoxide and nitrogen oxides are invisible, a vehicle inspection is an effective method to ensure that a vehicle is not polluting excessively.

In most cases, if the vehicle's check engine light is commanded on due to an emission component malfunction, then the Diagnostic Trouble Codes (DTC) are recorded and provided to the motorist. The vehicle will fail this portion of the inspection if the check engine light is commanded on. However, there are also some instances where the check engine light is on but no DTCs are stored. In either case, the vehicle will need to be repaired and brought back for a re-inspection.

**USEPA Reporting Requirement:** 40 CFR Part 51.366 (a)(2)(xix) The number of vehicles tested by model year and vehicle type where the MIL is commanded on and no codes are stored

### MIL Commanded On, No DTCs

There were no instances where the MIL was commanded on with no codes stored in 2020.

Another condition that can occur is when the vehicle's check engine light is NOT commanded on but a Diagnostic Trouble Codes (DTC) is stored within the vehicle's computer. The most likely reason for this condition is a fault code indicating a problem within the vehicle that had met the threshold for activating the check engine light but has since resolved itself. Since the MIL is not commanded on, the vehicle will pass this portion of the inspection.

**READINESS MONITORS:**

A vehicle's OBD system continually tracks and stores information about the emission control devices and other engine related components. Readiness monitors indicate if components have been fully evaluated and whether system components have experienced any driving conditions that prevent the vehicle from operating as designed by the manufacturer. The test equipment reads the readiness monitor statuses as part of the vehicle emissions inspection.

Vehicles "Not Ready" for OBD testing receive a reject test result. For 1996 - 2000 model year vehicles, a vehicle can have up to 2 readiness monitors unset; for 2001 and newer vehicles, only 1 readiness monitor can be unset. If the unset readiness monitors exceed the requirements, the vehicle will be rejected from further testing until this condition is corrected.

---

**USEPA Reporting Requirement: 40 CFR Part 51.366 (a)(2)(xxiii)**

***The number of vehicles tested by model year and vehicle type where the readiness status indicates that the evaluation is not complete for any module supported by on-board diagnostic systems.***

## OVERT AND COVERT PERFORMANCE AUDITS

---

***USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(2)(i)(ii)(v)***

State auditors conduct overt performance audits in conjunction with their equipment audits each week at the inspection facilities. The following table addresses the overt and covert performance audit activity.

---

***The number of inspection stations and lanes operating throughout the year:***

- (i) Receiving overt performance audits in the year: 194***
- (ii) Not receiving overt audits in the year: 20***
- (iii) Receiving covert audits in the year: 190***
- (iv) Not receiving covert audits in the year: 24***
- (v) That have been shut down as a result of overt performance audits: 0***

## COVERT AUDITS

---

***USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(3)***

There were 241 covert audits conducted in 2020.

## FINES, SUSPENSION OR TERMINATION DUE TO AUDIT FAILURES

---

***USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(4)***

1 inspector and 0 stations were suspended, fined or prohibited from testing as a result of overt or covert audits.

8 inspectors and 0 stations were suspended or prohibited from testing due to violations uncovered during data analysis.

---

## NUMBER OF INSPECTORS LICENSED OR CERTIFIED TO CONDUCT TESTING

---

*USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(5)*

There were 1,211 inspectors certified to conduct tests in 2020.

## NUMBER OF HEARINGS

---

*USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(6)*

There were 0 hearings held to consider adverse actions against inspectors and stations.

## FINES

---

*USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(7)*

There was \$0 collected in fines from inspectors and stations.

## COVERT AUDITS

---

*USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(8)*

There were 5 covert vehicles available for undercover audits.

---

*USEPA Reporting Requirement: 40 CFR Part 51.366 (b)(9)*

There were 5 auditor(s) available for undercover audits.

## QUALITY CONTROL REPORT

### NUMBER OF EMISSION TESTING SITES AND LANES

---

*USEPA Reporting Requirement: 40 CFR Part 51.366 (c)(1)*

There were 214 inspection sites available for testing in 2020.  
7 sites had 2 lanes

## NUMBER OF EQUIPMENT AUDITS BY STATION AND LANE

---

*USEPA Reporting Requirement: 40 CFR 51.366 (c)(2)*

*Equipment audits by station and lane.*

There were 2370 equipment audits conducted in 2020.

---

*USEPA Reporting Requirement: 40 CFR 51.366 (c)(3)*

*The number and percentage of stations that have failed equipment audits:*

There were 0 stations that failed equipment audits in 2020.

---

*USEPA Reporting Requirement: 40 CFR 51.366 (c)(4)*

*The number and percentage of stations and lanes shut down as a result of an equipment audit:*

There were 0 stations that were shut down resulting from an equipment audit failure.

## ENFORCEMENT REPORT

---

*USEPA Reporting Requirement: 40 CFR 51.366 (d)(1)(i): An estimate of the number of vehicles subject to the inspection program, including the results of an analysis of the registration database.*

Each month, the Wisconsin Department of Transportation selects vehicles subject to the mandatory testing requirement for registration renewal purposes. There were 637,632 vehicles selected (model years: 1996, 1998, 2000, 2002, 2004, 2006, 2008, 2010, 2012, 2014, 2016 and 2018) for notification in 2020. There were an additional estimated 142,593 vehicles selected for notification at change of ownership, for an estimated 780,225 vehicles.

---

***USEPA Reporting Requirement: 40 CFR 51.366 (d)(1)(ii): The percentage of motorists compliance based upon a comparison of the number of valid final tests with the number of subject vehicles.***

Overall, 618,184 vehicles receiving mandatory inspections in 2020 received a pass, waiver or diagnostic waiver test result. This is an 79.23% compliance rate for mandatory testing requirements. Variables include vehicles that changed ownership at the time their registrations were due and vehicles that were moved outside of the testing area after the registration select occurred.

---

***USEPA Reporting Requirement: 40 CFR 51.366 (d)(1)(iii): The total number of compliance documents issued to inspection stations.*** o

---

***USEPA Reporting Requirement: 40 CFR 51.366 (d)(1)(iv) The number of missing compliance documents.*** o

---

***USEPA Reporting Requirement: 40 CFR 51.366 (d)(1)(v) The number of time extensions and other exemptions granted to motorists.***

There were 4,632 temporary plates issued in 2020. WisDOT Vehicle Emissions Inspection Unit issued 20 temporary exemptions, and DMV issued 99,692 temporary exemptions in 2020.

---

***USEPA Reporting Requirement: 40 CFR 51.366 (d)(1)(vi) The number of compliance surveys conducted, number of vehicles surveyed in each, and the compliance rates found.***

One compliance survey was conducted in 2020. Of the 156 vehicles surveyed, 9(5.8%) were registered out of the program area. Of the 147 vehicles subject to emissions testing, 16 vehicles (10.9%) were not in compliance, resulting in a 89.1% compliance rate.

## REGISTRATION DENIAL BASED ENFORCEMENT PROGRAMS

---

***USEPA Reporting Requirement: 40 CFR 51.366 (d)(2)(i) A report of the program's efforts and actions to prevent motorists from falsely registering vehicles out of the program area or falsely changing fuel type or weight class on the vehicle registration, and the results of special studies to investigate the frequency of such activity.***

In 2020, WisDOT personnel completed investigations on 550 vehicles that listed domicile outside of the program area but were suspected of being kept in the program area. After receiving notification from WisDOT, 238 vehicles submitted to testing and received a passing result; 49 vehicles were suspended for failing to comply; 87 were junked or sold and 92 provided verification that they were being kept outside of the program area.

---

*USEPA Reporting Requirement: 40 CFR 51.366 (d)(2)(ii) The number of registration file audits, number of registrations reviewed, and compliance rates found in such audits.*

In 2020, the compliance rate for mandatory testing requirements was 79.23%. Variables include vehicles that changed ownership at the time their registrations were due, and vehicles that were moved outside of the testing area after the registration select occurred.

Registration files are reviewed in conjunction with investigations of vehicles with domicile listed outside of the program area. Of the 3,138 registration files reviewed, 550 vehicles were observed in the program area, but were listed outside of the program area. After receiving notification from WisDOT, 238 vehicles submitted to testing and received a passing result; 49 vehicles were suspended for failing to comply; 87 were junked or sold and 92 provided verification that they were being kept outside of the program area.

Also, 156 registration files were reviewed in conjunction with a compliance survey. Of the 156 vehicles surveyed, 9(5.8%) were registered out of the program area. Of the 147 vehicles subject to emissions testing, 16 vehicles (10.9%) were not in compliance, resulting in a 89.1% compliance rate.

## COMPUTER-MATCHING BASED ENFORCEMENT PROGRAMS

---

*USEPA Reporting Requirement: 40 CFR 51.366 (d)(3) Wisconsin is a registration denial-based enforcement system. This section is not applicable.*

## STICKER- BASED ENFORCEMENT PROGRAMS

---

*USEPA Reporting Requirement: 40 CFR 51.366 (d)(4) Wisconsin is a registration denial-based enforcement system. This section is not applicable*

## ADDITIONAL REPORTING REQUIREMENTS

### *BIEENNIAL REPORT WISCONSIN VEHICLE EMISSIONS TESTING PROGRAM INSPECTION AND MAINTENANCE PROGRAM 2019 – 2020*

#### INTRODUCTION

This report has been prepared for the U.S. Environmental Protection Agency (U.S. EPA), in compliance with the requirements of 40 CFR 51.366. The information in this report covers the reporting period of 2019-2020.

Since 1984, the DOT and DNR have jointly administered the Wisconsin Vehicle Inspection Program (WIVIP, or I/M PROGRAM). DNR establishes the emissions limitations and DOT administers the program. The program exists in response to requirements of the federal Clean Air Act, administered by U.S. EPA.

The WIVIP addresses violations of the 8-hour ozone and carbon monoxide National Ambient Air Quality Standards. The primary goals of this program are to identify and repair vehicles emitting excessive amounts of targeted air pollutants – carbon monoxide (CO), nitrogen oxides (NOx), and volatile organic compounds (VOCs). The program also reduces emissions of particulate matter and toxic chemicals such as benzene, 1,3 butadiene and formaldehyde.

The I/M program began operating as a basic program in Wisconsin's six-county "severe" ozone non-attainment area – Kenosha, Milwaukee, Ozaukee, Racine, Washington and Waukesha counties. The program expanded to Sheboygan County, designated a "moderate" ozone nonattainment area, in July 1993. Initially, all vehicle inspections consisted of measuring tailpipe emission levels. Since July of 2001, however, all model year 1996 and newer cars and light trucks receive inspections by scanning the vehicles' computerized second-generation on-board diagnostic (OBD-II) systems. In July 2008, the program dropped tailpipe testing entirely and thereby inspected all vehicles by scanning the OBD-II systems. This resulted from statutory changes in the 2007-2009 biennial budgets exempting from the vehicle inspection program the model years of vehicles not federally required to be equipped with the OBD-II technology (model year 1995 and older cars and light trucks and model year 2006 and older heavy trucks).

The WIVIP tested approximately 674,317 vehicles in 2019. The program's aggregate failure rate in 2017 (among pass and fail results) was 4.95%. In 2020, the WIVIP tested approximately 626,966 vehicles, and had an aggregate fail rate of 3.85%.

The primary mode of I/M program compliance enforcement in Wisconsin is denial of vehicle registration. Testable vehicles in the seven I/M counties must obtain either a passing emission inspection or a waiver before the owner can renew her/his registration. Upon completing the testing and registration renewal process, the motorist receives a license plate sticker indicating the month and year until which the registration remains valid.

Currently, motorists qualified to renew their registration may do so through the WisDOT Division of Motor Vehicles (DMV), at an emissions inspection station, or at one of numerous other authorized third-party DMV Agent sites. The latter include a variety of businesses, e.g. convenience marts, financial service centers, and some municipal offices. Motorists may also renew online.

---

*USEPA Reporting Requirement: 40 CFR 51.366 (3)(1) Any changes made to the program design, funding, personnel levels, procedures, regulations, and legal authority with detailed discussion and evaluation of the impact on the program of all such changes*

## WAIVER REPAIR COST LIMIT RAISED

The waiver repair cost limit increased to \$935, effective July 1, 2020.

---

*USEPA Reporting Requirement: 40 CFR 51.366 (3)(2)*

*Any weaknesses or problems identified in the program within the two-year reporting period, what steps have already been taken to correct these problems, the results of those steps, and any future efforts planned.*

## COVID 19 PANDEMIC IMPACTS

Wisconsin Governor Tony Evers issued an emergency Executive Order effective March 12, 2020 allowing for a 90 day extended deadline for vehicle emissions inspections. The Wisconsin Vehicle Inspection Program continued to provide emissions inspections through this time. The 90 day extension for vehicles whose emissions tests expired during the public health emergency ended on July 1, 2020. As of August 1, vehicles were required to pass an emissions test before registration renewal.

## PROGRAM ISSUES IDENTIFIED AND CORRECTED

The Wisconsin DOT and Opus Inspection worked together on an ongoing basis to address and resolve any issues that arose during the operation of the vehicle inspection and maintenance program. The continuing communication between the parties results in no long-term issues.
